Status icon	What it means	
	Cell signal*	Shows whether you're in range of the cellular network and can make and receive calls. The more bars, the stronger the signal. If there's no signal, the bars are replaced with "No service."
	Airplane mode	Shows that airplane mode is on—you cannot use the phone, access the Internet, or use Bluetooth® devices. Non-wireless features are available. See <a href="#">Airplane mode</a> on page 130.
	LTE	Shows that your carrier's LTE network is available, and iPhone can connect to the Internet over that network. (iPhone 5: Not available in all areas.) See <a href="#">Cellular</a> on page 135.
	UMTS	Shows that your carrier's 4G UMTS (GSM) network is available, and iPhone can connect to the Internet over that network. (iPhone 4S or later: Not available in all areas.) See <a href="#">Cellular</a> on page 135.
	UMTS/EV-DO	Shows that your carrier's 3G UMTS (GSM) or EV-DO (CDMA) network is available, and iPhone can connect to the Internet over that network. See <a href="#">Cellular</a> on page 135.
	EDGE	Shows that your carrier's EDGE (GSM) network is available, and iPhone can connect to the Internet over that network. See <a href="#">Cellular</a> on page 135.
	GPRS/1xRTT	Shows that your carrier's GPRS (GSM) or 1xRTT (CDMA) network is available, and iPhone can connect to the Internet over that network. See <a href="#">Cellular</a> on page 135.
	Wi-Fi*	Shows that iPhone is connected to the Internet over a Wi-Fi network. The more bars, the stronger the connection. See <a href="#">Wi-Fi</a> on page 130.
	Do Not Disturb	Shows that "Do Not Disturb" is turned on. See <a href="#">Sounds</a> on page 139.
	Personal Hotspot	Shows that iPhone is connected to another iPhone providing a Personal Hotspot. See <a href="#">Personal Hotspot</a> on page 132.
	Syncing	Shows that iPhone is syncing with iTunes.
	Network activity	Shows network activity. Some third-party apps may also use the icon to show an active process.
	Call Forwarding	Shows that Call Forwarding is set up on iPhone. See <a href="#">Call forwarding, call waiting, and caller ID</a> on page 49.
	VPN	Shows that you're connected to a network using VPN. See <a href="#">Cellular</a> on page 135.
	Lock	Shows that iPhone is locked. See <a href="#">Sleep/Wake button</a> on page 8.
	TTY	Shows that iPhone is set to work with a TTY machine. See <a href="#">TTY support</a> on page 128.
	Play	Shows that a song, audiobook, or podcast is playing. See <a href="#">Playing music</a> on page 58.
	Portrait orientation lock	Shows that the iPhone screen is locked in portrait orientation. See <a href="#">Portrait and landscape orientation</a> on page 19.
	Alarm	Shows that an alarm is set. See <a href="#">Chapter 19, Clock</a> , on page 90.
	Location Services	Shows that an item is using Location Services. See <a href="#">Privacy</a> on page 140.
	Bluetooth*	<i>Blue or white icon:</i> Bluetooth is on and paired with a device. <i>Gray icon:</i> Bluetooth is on and paired with a device, but the device is out of range or turned off. <i>No icon:</i> Bluetooth is not paired with a device. See <a href="#">Bluetooth devices</a> on page 32.
	Bluetooth battery	Shows the battery level of a supported paired Bluetooth device.
	Battery	Shows battery level or charging status. See <a href="#">Battery</a> on page 34.

A European-style bar under a lofty, open railway arch, serving a wide range craft and European beers, wine, cocktails and juices (run by arch restaurateur and maitre d Jon Spiteri, and his son Fin). Awesome, you're subscribed!Thanks for subscribing! Look out for your first newsletter in your inbox soon! Chikena/Shutterstock.com Manufacturers and carriers often pre-install a bunch of apps on Android phones. If you don't use them, they just clutter your system and drain your battery in the background. Take control of your device and stop the bloatware. Uninstalling vs. Disabling Bloatware You have a few choices when it comes to removing bloatware from your system. Uninstalling an app is exactly what it sounds like—the app is entirely removed from your device. This is only possible for “non-essential” apps. You can't uninstall a system app. These are typically apps like the phone, calendar, messaging, file manager, etc. Removing them could make the phone malfunction, which is why it's not possible without extreme measures. What constitutes a “system” app depends on the device. Sometimes you can't even uninstall the calculator. Apps that could cause issues if they were fully uninstalled can sometimes be “disabled.” A disabled app is still installed on the device, but it can't be opened or run in the background. For practical purposes it's “uninstalled,” just not technically. Still, not all apps can be disabled, either. For example, the phone app and messaging app are typically not able to be disabled. The manufacturer doesn't want you to end up without them. RELATED: How to Uninstall Android Apps From Your Smartphone or Tablet How to Remove Bloatware on Android First, swipe down from the top of the screen (once or twice, depending on your device) and tap the gear icon to open the Settings menu. Next, select “Apps.” You may need to tap “See All (Number) Apps” for the full list of installed apps. Some devices show the full list right away. Select the app that you wish to uninstall or disable. On the app info page, you'll either see the option to “Uninstall” or “Disable.” Tap it to remove the app. A pop-up will ask you to confirm that you want to uninstall or disable the app. Tap “OK” or “Disable App” to proceed. If the app can't be disabled, the option will be grayed out. That's all there is to it. To re-enable an app, visit this page again and tap “Turn On” or “Enable.” As mentioned, uninstalled apps will be completely removed and you'll either need to re-install from the Play Store or sideload the APK. Disabled apps are still on the device. Hopefully, you don't have too much bloatware to remove. RELATED: How to Sideload Apps on Android By Serim Murmson i Jupiterimages/Photos.com/Getty Images Android phones are susceptible to some of the same Internet-based problems as desktop and laptop computers. You may experience pop-ups on your Android phone in your Internet browser or from other independent applications. In order to remove these pop-ups, you can adjust your browser settings and monitor other processes on your phone. Pop-ups on your Android Internet browser can be extremely distracting because the browser takes up the entire screen. Dolphin Browser, Boat Browser and Opera feature a pop-up blocking setting in order to avoid this. If you are experiencing pop-ups in your Internet browser, check your browser's settings menu for pop-up options. Some browsers disable pop-ups automatically and may not offer the option to adjust this setting in the browser menu. If you continue to have trouble with pop-ups in your browser, try to reinstall your browser or switch to a different one. If you have applications running in the background of your Android phone, they may cause unwanted pop-ups during your normal Android usage. In order to check your background phone apps and processes, select the Running tab in your Apps Settings menu. If you tap a currently-running process, you can then tap the “Stop” button in order to end that process. Make sure you understand what an app is doing before you delete it. Some critical system services constantly run in the background. Many apps feature unwanted pop-ups in the form of ads. In this case, these pop-ups are nearly unavoidable. In order to avoid ad-based popups within a specific app, you typically must purchase an upgraded version. Some apps are completely free but rely on advertising for developer revenue. Therefore, in certain apps you can't disable any pop-up ads within that specific app. In order to prevent app-based pop-ups before they begin, check an app's permission list before installing it. The permission list will automatically display after you tap the “INSTALL” button in the app's Google Play listing. Some developers will also list the permission for the app and how those permissions are used in the app description section. If you notice any suspicious or unnecessary permissions in an app's permissions list, do not install it. For example, if an app provides a non-Internet service for your phone but requests permission to use your phone's Internet connection, the app will probably use advertisements of some sort. If you continue to have problems with pop-ups despite your best efforts at Internet browser and app control, the problem may lie at a deeper level. In this case, you may need to restore your phone's factory settings. This will delete all personal data and downloaded apps from your phone. The exact procedure for a factory reset differs based on your Android operating system version and phone manufacturer. Before you perform a reset, make sure you have backed up your contacts and any other critical information to an external device. Chikena/Shutterstock You might think the only way to prevent apps from showing notifications in the status bar is by turning them off completely. That's not true. You can “minimize” notifications so they're only visible by expanding Android's notification shade. Android offers a lot of tools for fine-tuning notifications. However, most of these methods boil down to turning things on or off. “Minimized” notifications aren't disabled completely, but they appear in a much less prominent way. RELATED: How to Pause Notifications on Android First, swipe down from the top of your device's screen (once or twice, depending on your phone or tablet's manufacturer) and tap the gear icon to open the Settings menu. Next, select “Notifications.” It might also be called “Apps & Notifications.” You'll see an abridged list of your recently used apps. This will look different depending on your device. Select the option to expand the full list. With the full list open, find the app that you'd like to minimize notifications for. Next, you'll see the list of Notification Channels. These are all the different types of notifications that the app uses. Select the channel associated with the type of notification that you want to minimize. Note: On some devices, you'll need to select “Notifications” before seeing the Notification Channels. Now, select the “Silent” option at the top. Once you switch to Silent, the “Minimize” option will appear. Toggle it on. Here's an example of what a minimized notification looks like. Notice how the Google Fi icon isn't in the status bar, but how the notification is visible in the “Silent” section when I expand the notification shade. This is a nice little trick for those pesky apps that can distract you with notifications but aren't unimportant enough to completely block out of your life. RELATED: What Are Android Notification Channels? . Tuesday September 13, 2022 11:55 am PDT by Sami FathiApple this week released iOS 16, the latest version of iOS with a new customizable Lock Screen, major new additions to Messages, and enhancements to Mail, Maps, and more. Other than the headlining features, there are a number of quality-of-life changes, improvements, and new capabilities baked into iOS 16 that help improve the iPhone experience. We've listed 16 hidden features and changes...
